

## New Infographic Outlines U.S. Oil Usage In Reader-Friendly Way

DRAPER—Christensen Law Firm recently designed and published an infographic to inform citizens about U.S. oil consumption and production rates.

When asked why his firm produces sources of information like the new infographic *U.S. Oil Usage*, Ken Christensen of the Christensen Law Firm said, “We like to be informed and we like our community to be informed on the big issues in our country. When issues are presented in an easily understood format more people read it and can play a part in the necessary change.”

The infographic begins with a general number that represents the amount of oil that is imported to the U.S. and then creatively falls into a cleverly designed pie chart, which gives a country by country breakdown of our oil suppliers. The chart immediately serves as an informative graphic when it reveals that the commonly held ideal that Persian Gulf countries supply most of our oil is, in fact, false.

The amount of barrels used in the U.S. everyday and how that breaks down per category, (vehicles, planes, etc.), is next on the graphic. The most startling information is left for the end when the U.S. is numerically and pictorially compared to other countries in a global daily oil consumption chart.

This infographic (found at <http://www.utahpersonalinjurylawfirm.com/info-graphic-united-states-oil-consumption.html>), is definitely worth the visit to Christensen Law Firm’s website. It uses easy to understand pictures to properly inform, dispel myths and incite alarm in all those who read it.

Christensen Law Firm is located in Draper, UT. Their main goal is to provide compassionate service to clients and their families.
